

ENVIROMENTAL POLICY (Revised 2009)

At Aquamain(UK) Ltd it is our policy comply with the requirements of environmental legislation and approved codes of practice. We will assess the environmental impact on all current and future operations and continuously seek to improve on our environmental performance and review our policy on an annual basis.

Our key areas are as follows:

Minimizing Waste by means of Recycling

The Recycling of Used/unused plastic pipe and any other recyclable materials or packaging.

To advise our customers on the efficient use of water by offering water leak detection, Rain Water Harvesting and installation of water saving devices as to reduce the impact on our water sources.

As a company we are minimizing the use of any solvents used within our operations and where the uses of solvents are required will look for other alternatives.

Any of our operational work involving timber will come from sustainable managed forests only.

We will where possible, actively try to minimize the noise and disturbance to neighbors' and customers by giving notification of when the work will be commencing. Noise will also play a part in the selection of new plant the company purchases in the future.
